

Annual Regional Performance Report

Revenue grew 12% YoY, driven primarily by APAC expansion and improved cost discipline, as detailed in the Regional Performance Appendix.

A handful of long-standing vendor contracts were renegotiated on improved terms. Employee retention held steady, with attrition below the prior-year average. Operational efficiency continued to improve as the team streamlined several internal processes. Customer satisfaction scores remained stable across all regions this period.

Employee retention held steady, with attrition below the prior-year average. Operational efficiency continued to improve as the team streamlined several internal processes. Customer satisfaction scores remained stable across all regions this period. The engineering team shipped several reliability improvements ahead of schedule.

Operational efficiency continued to improve as the team streamlined several internal processes. Customer satisfaction scores remained stable across all regions this period. The engineering team shipped several reliability improvements ahead of schedule. Marketing spend was reallocated toward higher-performing channels mid-quarter.

Customer satisfaction scores remained stable across all regions this period. The engineering team shipped several reliability improvements ahead of schedule. Marketing spend was reallocated toward higher-performing channels mid-quarter. Supply chain lead times normalized after last quarter's disruptions.

The engineering team shipped several reliability improvements ahead of schedule. Marketing spend was reallocated toward higher-performing channels mid-quarter. Supply chain lead times normalized after last quarter's disruptions. Headcount growth was modest, concentrated primarily in customer-facing roles.

Marketing spend was reallocated toward higher-performing channels mid-quarter. Supply chain lead times normalized after last quarter's disruptions. Headcount growth was modest, concentrated primarily in customer-facing roles. A handful of long-standing vendor contracts were renegotiated on improved terms.

Supply chain lead times normalized after last quarter's disruptions. Headcount growth was modest, concentrated primarily in customer-facing roles. A handful of long-standing vendor contracts were renegotiated on improved terms. Employee retention held steady, with attrition below the prior-year average.

Headcount growth was modest, concentrated primarily in customer-facing roles. A handful of long-standing vendor contracts were renegotiated on improved terms. Employee retention held steady, with attrition below the prior-year average. Operational efficiency continued to improve as the team streamlined several internal processes.

A handful of long-standing vendor contracts were renegotiated on improved terms. Employee retention held steady, with attrition below the prior-year average. Operational efficiency continued to improve as the team streamlined several internal processes. Customer satisfaction scores remained stable across all regions this period.

Employee retention held steady, with attrition below the prior-year average. Operational efficiency continued to improve as the team streamlined several internal processes. Customer satisfaction scores remained stable across all regions this period. The engineering team shipped several reliability improvements ahead of schedule.

Operational efficiency continued to improve as the team streamlined several internal processes. Customer satisfaction scores remained stable across all regions this period. The engineering team shipped several reliability improvements ahead of schedule. Marketing spend was reallocated toward higher-performing channels mid-quarter.

Customer satisfaction scores remained stable across all regions this period. The engineering team shipped several reliability improvements ahead of schedule. Marketing spend was reallocated toward higher-performing channels mid-quarter. Supply chain lead times normalized after last quarter's disruptions.

Employee retention held steady, with attrition below the prior-year average. Operational efficiency continued to improve as the team streamlined several internal processes. Customer satisfaction scores remained stable across all regions this period. The engineering team shipped several reliability improvements ahead of schedule.

Operational efficiency continued to improve as the team streamlined several internal processes. Customer satisfaction scores remained stable across all regions this period. The engineering team shipped several reliability improvements ahead of schedule. Marketing spend was reallocated toward higher-performing channels mid-quarter.

Customer satisfaction scores remained stable across all regions this period. The engineering team shipped several reliability improvements ahead of schedule. Marketing spend was reallocated toward higher-performing channels mid-quarter. Supply chain lead times normalized after last quarter's disruptions.

Regional Performance Appendix

The table below breaks out revenue by period for the APAC region.

Metric	Value
Revenue (current period)	\$112M
Revenue (prior period)	\$100M

Employee retention held steady, with attrition below the prior-year average. Operational efficiency continued to improve as the team streamlined several internal processes. Customer satisfaction scores remained stable across all regions this period. The engineering team shipped several reliability improvements ahead of schedule.

Operational efficiency continued to improve as the team streamlined several internal processes. Customer satisfaction scores remained stable across all regions this period. The engineering team shipped several reliability improvements ahead of schedule. Marketing spend was reallocated toward higher-performing channels mid-quarter.
